

## Cien, doscientos ...

Numbers affect so many areas of activity in life that it pays to practise them frequently. This is an extension of **uno, dos, tres** in Stage 1, using the same method to provide practice in the higher numbers.

### Getting ready

Print page 2 onto thin card and cut the main grid first into columns 0-9. For each pair or small group you'll need a set of three columns: cut these into the individual digits and put in an envelope.

Present and practise numbers as a group before starting the activity. To allow learners to focus on getting familiar with the actual numbers, it's probably a good idea to leave detail such as **cien+noun** and **doscientos/doscientas** until later.

### Getting them talking

Learners work together in threes, each person in turn taking a digit and laying it down next to the one before to make a new number, for example:

3, 38, 380

5, 59, 591

Alternatively, put the new digit in front:

4, 34, 234

7, 17, 617

0	0	0	0	0	0	0	0	0	0
1	1	1	1	1	1	1	1	1	1
2	2	2	2	2	2	2	2	2	2
3	3	3	3	3	3	3	3	3	3
4	4	4	4	4	4	4	4	4	4
5	5	5	5	5	5	5	5	5	5
6	6	6	6	6	6	6	6	6	6
7	7	7	7	7	7	7	7	7	7
8	8	8	8	8	8	8	8	8	8
9	9	9	9	9	9	9	9	9	9
